

# Django

Admin Customization

# Admin Panel

- Comes with a default admin panel.
- Helps in adding user groups/users/ permissions and many more

1. Run the application
2. Go to <url>/admin/

# Create User

`python manage.py createsuperuser`

Enter required details

# Theming option for Django

1. <https://djangopackages.org/grids/g/admin-styling/>
2. Third party vendors also supply templates.

Installation remains mostly the same.

# New Theme for Admin Panel

1. Install the package
2. Configure in settings.py
3. Migrate
4. Run the webserver

<https://github.com/django-cms/djangocms-admin-style>

# Customize the admin panel

How framework works?

If an existing file is not overridden, earlier file will be served. So if we want to customize something make the relevant changes in the file and it will replace the existing setup.

[https://github.com/django-cms/djangocms-admin-style/tree/master/djangocms\\_admin\\_style/templates/admin](https://github.com/django-cms/djangocms-admin-style/tree/master/djangocms_admin_style/templates/admin)

1. Mention the templates directory in settings.py
2. Create relevant folders
3. Copy base\_site.html
4. Customize it
  - a. Remove branding block and see the changes
5. Copy other files, make changes, refresh and see the changes
  - a. Edit branding.html
  - b. Title.html etc
